I started my career in supply chain on a fulfillment-center floor and spent fourteen years working up to the rooms where executives decide. Along the way: a same-day delivery network launched inside a Fortune 500; a patient-experience company I co-founded and grew to 250 healthcare locations; six years at Google advising 165+ global enterprises, with a briefing franchise read by the leadership of 700 client organizations. Today I run Bridgehead Labs, a supply chain x AI consulting firm, built and operated on frontier AI agents.

Experience

Bridgehead Labs — Founder

2026 – Present

Tiburon, CA

- Built two reinforcement-learning environments that stress-test AI agents on GPU procurement under supply-chain crisis, built at a Y Combinator hackathon for reinforcement-learning environments, and published on Substack under Darkroom Developments: a working study of how a consulting firm built around AI from day one does things differently.
- The firm followed demand: a consulting invitation arrived before the firm existed, so I built one in weeks, with AI agents standing up the LLC, the brand, and the client tooling.
- Built "Consultant in a Box": a pipeline distilling the classic strategy literature into 3,335 cited cards of frameworks, worked examples, and diagnostics, so every recommendation in a deliverable carries its page reference instead of a consultant's say-so.
- Run the practice on an agentic stack built to my design: research and monitoring agents, recall over the firm's own record, and automated run-verification.

Google — Supply Chain Consultant, International Growth Team (AMER)

May 2019 – Oct 2025

The sole supply chain consultant in Google's Global Business Organization for the Americas, and author of its consulting offering.

- Advised 165+ global enterprises (eBay, Etsy, LVMH, Peloton, Grainger) across three continents: eighteen engagements a quarter, three of them executive summits, each built on discovery with the account team and the client's own operators.
- Engagements were vetted on deal value, a minimum \$600K in incremental Google revenue attached before I entered the room, roughly \$70M a year on my slate; the practice measured a 7% uplift in client export revenue following consultation.
- Authored the State of Supply Chain (2020–2025), grown from a COVID memo into a C-suite strategic briefing; every recommendation written three ways: margin for the CFO, resilience for the COO, demand for the CMO.
- Matured the report into Reactive to Resilient, a live crisis simulation: a tabletop for Walmart's global-operations leadership revealed their port-strike plan would itself shut down the West Coast ports; the needs it surfaced fed the Cloud account team.
- Created Project Gestalt, turning hardware logistics from a cost center into a revenue channel: C-suite summits designed end to end and run with no authority over any organization in the room; the J.B. Hunt arc contributed to the partnership motion behind a publicly announced multi-year Google Cloud alliance (2021).
- Built and taught presenter preparation for the entire IGT Americas sales organization after watching an unprepared executive blow up a C-suite summit: two-page briefs, day-before absorption interviews, a names-to-faces walkthrough.
- Adopted AI early: a 10-K scanner feeding every consultant's call briefs; a hackathon demo compressed weeks of account prep into fifteen minutes. Promoted L5 to L6 in about two years; led the culture rebuild as the team quadrupled to more than sixty.

Darkstore — Director, Supply Chain & Operations

May 2018 – Apr 2019

San Francisco, CA

- Ran an asset-light same-day network of 43 fulfillment centers across 40 US markets; launched 2-hour delivery for brands including Nike.

Staples — Product Manager, Strategic Initiatives & Same-Day Delivery

2012 – 2018

PM, Same-Day Delivery (2016–2018) · PM, Transportation (2014–2016) · Supply Chain Leadership Rotational Program (2012–2014)

- Staples Rush, zero to one: found ~90% of B2B customers could be served same-day from store inventory, then went idea to live in six weeks with a \$50K budget and 26 cross-functional teams that did not report to me.
- Made the case in the CEO's boardroom, and killed the twenty-year compliance myth behind Staples' timid delivery promises by tracing an old FTC fine to its actual rule. The organization had been obeying a story, not a regulation.
- Earned it on the floor first: 400 associates across seven departments in a 350,000 sq ft fulfillment center, and a 60-driver daily final-mile fleet across DFW.

ChargeRx — CEO & Co-Founder

2015 – 2018

Boston, MA · *built alongside the Staples role*

- Took a patient-charging product from zero to 250 healthcare locations by selling on the number hospitals are paid on: HCAHPS scores. Mining survey verbatims opened Memorial Sloan Kettering, Cleveland Clinic, and Boston Children's.
- Repositioned toward the larger hospital-noise problem with Holosonics' directional speakers, winning the Audience Choice Award at the MIT Sloan Healthcare Innovations Prize finals (2018), competing as Healthcare Hospitality Systems. Exited profitably.
